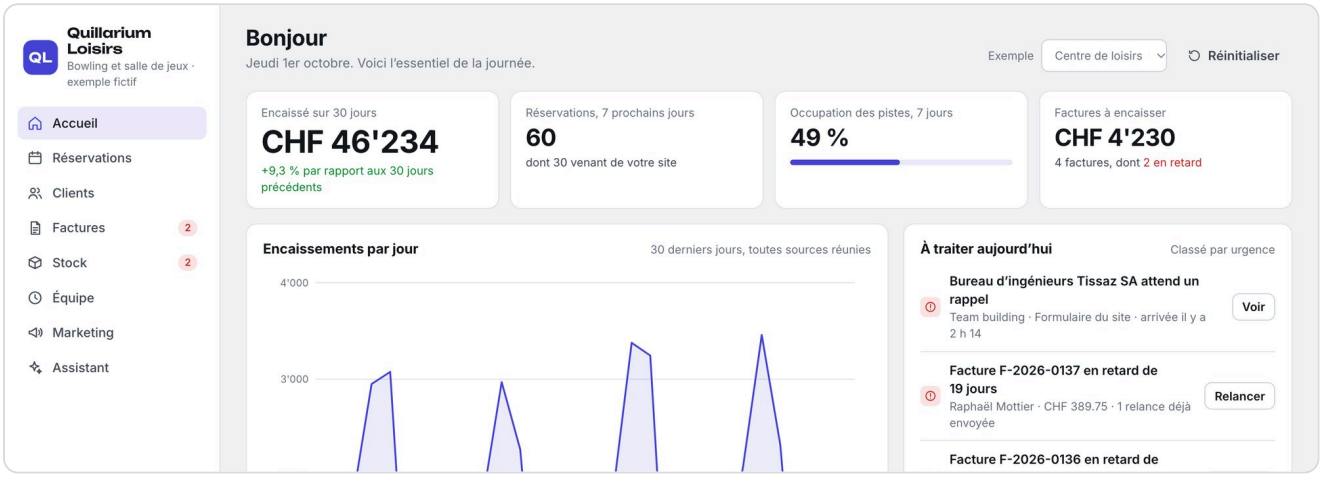
INTERACTIVE DEMO

What Omniscient builds, shown in ten minutes.

The demo is the management software of a fictional company, with invented data. Most screens reproduce tools Omniscient has already deployed, for clients or for itself. It runs in any web browser, on a laptop or a phone.



The home screen of the demo, with the « Centre de loisirs » example.

Open the demo

Online: robert-lagorio-demo.vercel.app/demo in French, **/en/demo** in English. The same site has the case study, the IT checklist and the prices, in French and English.

Offline copy: the file **03-Cockpit-Omniscient.html** (French) or **03-Cockpit-Omniscient-EN.html** (English) in this kit. Double-click it to open it in your browser. The fonts and the QR code need an internet connection.

Before you start

- Pick the example that matches the prospect in the « Exemple » list, top right (under the title on a phone): « Centre de loisirs », « Restaurant », « Artisan », « Cabinet de santé » or « Commerce ».
- The panel at the bottom of the screen, usually on the right, is the guided tour, 16 steps. Its texts are in the language of the demo: you can read them aloud. If it hides what you want to show, close it with ×: the red « Visite guidée » button brings it back at the same step.
- Everything is simulated. No e-mail, payment or order leaves the demo. « Réinitialiser » clears your test entries and loads a new set of invented data: names and amounts change.
- Never say which client a screen comes from. The demo and the case study are anonymous on purpose.

The 16 steps of the guided tour

Click the red « Suivant » button in the tour panel. The demo moves to the right screen and briefly highlights what to look at.

NO.	SCREEN	WHAT IT SHOWS	TRY THIS
1	**Accueil**	A fictional company with invented data. Most screens already run at Omniscient's clients or at Omniscient; the rest shows what can be built.	Read the text aloud.
2	**Accueil**	All the money in one figure: online payments, card terminal, TWINT, cash and invoices added up every day.	Hover over the chart.
3	**Accueil**	One list of what needs action today: a lead not called back, a late invoice, a payment to match, low stock.	Click « Relancer ».
4	**Réservations (name varies)**	Customers book online. Confirmation and reminders go out on their own.	Click a free slot, then « Confirmer ».
5	**Clients**	Every request with its source, and a timer that runs until someone calls back.	Move a request to the next stage.
6	**Factures › Devis et factures**	A quote becomes an invoice in one click, with the Swiss QR bill and a TWINT payment link. Reminders are automatic.	« Nouveau devis », « Créer le devis », then « Accepté : créer la facture ».
7	**Factures › Banque**	The statement is fetched every morning. A payment with an invoice's reference marks it paid.	Click « Attribuer ».
8	**Factures › Encaissements du jour**	Card terminal, TWINT and cash, each with its fees. The evening count shows any difference.	« Clôturer la journée ».
9	**Factures › Résultat**	Profit and loss for the last 30 days, without waiting for the accountant.	Read the last line.
10	**Stock**	Each item has a minimum level. Below it, an alert and an order in one click.	Click « Commander ».
11	**Équipe**	The weekly schedule builds itself. Staff see their hours and ask for leave from their phone.	Accept the leave request, then generate the schedule.
12	**Marketing**	Advertising judged on money actually received. One post published on all your networks.	Switch an automatic e-mail on or off.
13	**Accueil**	Sensors measure temperature and humidity in each room, every 5 minutes.	Point at the sensor with the orange warning (« Trop chaud » in the leisure centre).
14	**Assistant**	Questions answered in French from the company's data. Documents received are read by AI and checked by a person.	Click a question, then « Lire le document d'exemple ».
15	**« Exemple » list**	The same software in the prospect's trade, with its words and colours.	Change the example, top right (under the title on a phone).
16	**Accueil**	Omniscient comes on site, then says in writing what can be automated.	Stop the demo and ask the question on page 3.

From the demo to the prospect's own business

The demo shows a fictional company. The prospect runs something else. After the tour, bring the conversation back to them with one question.

> SAY, IN FRENCH
> « Chez vous, qu'est-ce que votre équipe saisit encore à la main, et combien de fois ? »

Their questions

IF THEY ASK	WHAT TO DO	SAY, IN FRENCH
Is this real? Which client?	Never name a client.	« La plupart des écrans reprennent des outils qu'Omniscient a déjà construits, pour des entreprises romandes ou pour elle-même. Les noms et les chiffres sont inventés, pour protéger ces clients. »
Can I have just one part?	Yes.	« Oui. Omniscient construit seulement ce qui vous sert, en commençant par ce qui vous fait gagner le plus de temps. »
The price	Only the published prices, on the site.	« Les tarifs de départ sont publiés sur le site. Pour votre projet, Omniscient vous remet une offre écrite après son entretien avec vous. »
How long it takes	Do not promise a delivery time.	« Ça dépend de ce que l'entretien avec Omniscient montrera. Je préfère ne pas vous promettre de date. »
Who maintains it	Omniscient looks after what it builds.	« Omniscient suit l'outil et l'améliore avec le temps. Le code et les données vous appartiennent. »

If something goes wrong during the demo

- The screen looks odd or full of test entries: click « Réinitialiser ».
- The guided tour is closed: click the red « Visite guidée » button, bottom right.
- The online link does not open: use the offline file in this kit, and tell Balint.
